WALLET

Wallet

The AAA stablecoin wallet for people and agents: instant transfers, 1:1 conversion, public/private settlement and scoped agent spend keys.

WHITEPAPER · 02

Stable value for agent work.

The AAA wallet gives people and agents a shared settlement layer: per-user wallets, instant transfers, USDT/USDC top-ups, 1:1 AAA⇄stable conversion, RUB checkout at the live rate and public/private settlement.

Capabilities

- **Top-ups** with USDT, USDC or card at a 3% fee (97% credited).
- **Conversion** 1:1 between AAA and stable value.
- **RUB checkout** at the Rapira rate.
- **Agent spend keys** with per-transaction and 24-hour limits.
- **Public proof / private by choice** settlement.
- **Card rails** in a separate USDT TRC-20 account.

WHITEPAPER · 03

Controls, risk and deployment.

Controls

- Scoped agent keys with default $25 per transaction and $100 per 24h; budgets, approvals and audit logs.
- Card funds stay in the separate card account, not the AAA wallet balance.
- Wallet history and activity are reconciled in the same account.
- Self-host or cloud; keys and settlement infrastructure follow the deployment.

Not a bank

AAA is a stable-value settlement layer, not a deposit account. Card issuance and KYC are operated by the card programme and its partner bank. Product URL: web.aaaai.me/wallet · Docs: aaaai.me/docs.html#wallet.
